

Training Plan | Python with GCP

Tuesday, September 1, 2026 1:50 AM

Plan for Mayank:

Week 1: Python + Engineering Fundamentals

=====

Key Learning:

Python syntax, OOP, collections, exceptions, modules, virtual environments, pip, logging, Git. Understand existing application structure and coding standards.

Expected Output:

Build a small Python CLI application, logging and proper project structure. Submit via Git PR.

Week 2: GCP Fundamentals + Serverless:

=====

Key Learning:

GCP basics: IAM, projects, Cloud Storage, Cloud Functions, Cloud Run, logging/monitoring. Deploy simple Python services to GCP.

Expected Output:

Python service deployed to Cloud Run/Function and integrated with Cloud Storage. Basic README + architecture diagram.

Week 3: Enterprise Application & Integration

=====

Key Learning:

REST APIs, JSON, API authentication, configuration management, error handling, retries, async/event-driven concepts. Understand existing product architecture and integration patterns.

Expected Output:

Develop an API-based integration service with Cloud Storage/event trigger → Python service → downstream API. Unit tests + error handling.

Week 4: Product Team Readiness + Independent Delivery

=====

Key Learning:

Pick a small real product backlog item/defect. Understand requirements independently, identify impacted components, implement, test, document and raise PR. Participate in stand-up/PR discussions.

Expected Output:

Production-quality small feature/bug fix, Perform Unit Tests, documentation and PR. Get it reviewed on call and answers to every question asked.
